

Morgan Global Network

As a global solutions provider with a network of engineering and production facilities worldwide, we're able to deliver on-time, quality solutions across multiple industries that rely on advanced materials. Our global access to raw materials, combined with the unparalleled expertise of a worldwide materials technology firm, has established Morgan AM&T as a global leader, with four core competencies in Materials Expertise, Applied Engineering, Consistency and Customer Insight.

Our ability to develop effective solutions, formulate innovative material compositions, manufacture to specification, and deliver reliable products and services is widely recognised around the globe. Our leading-edge technology centres work together to share ideas and develop new solutions for tomorrow's challenges.

This ensures that we will continue to evolve to meet your demands – no matter where you are – by engineering the solutions you need with the reliability and service you expect.

Material Expertise

Morgan AM&T is a globally recognised materials technology company with unparalleled expertise in the processing and applications of carbon, graphite, silicon carbon, oxide ceramics and other related materials.

Morgan AM&T provides solutions and materials engineering to enhance the performance of your products or processes. Our global access to raw materials, combined with worldwide materials technology expertise has established us as a world leader.

Our knowledge and expertise in the material sciences, coupled with our proprietary technology processes, enable us to deliver solutions for industry that are tailored to customer-specific applications. With our state-of-the-art technical centres, we are constantly expanding our knowledge database, bringing new solutions to the market that others never thought possible. Our commitment to innovation extends to our entire line of advanced materials.

Applied Engineering

Protecting the environment is another major concern for Morgan AM&T. We have been a supplier of carbon-based solutions to fuel cell companies for more than 20 years and have played a major role in industry milestones. Combining our engineering expertise with material development we can support process efficiencies. With photovoltaic devices increasingly utilised to provide solar energy, our strong links in the silicon semiconductor industry facilitate development of new materials to improve production in both silicon and thin film solar cell manufacturing.

Additionally, increasing global demand for clean water requires advanced filtration solutions. These are provided by our inorganic carbon membrane tubes. For the civil defence and military forces that face danger on a daily basis, Morgan AM&T has developed advanced ceramic strike face solutions that match specific ballistic requirements to a variety of advanced materials for armouring troops, vehicles and aircraft. These are just a few examples of the performance solutions we provide. From challenge... to innovation... to solution – that's the Morgan AM&T way.

Consistency

Product innovation is only part of the equation. The other part is reliable, on-time delivery and service. Having those components on hand when and where you need them is equally critical. We take pride in meeting your schedule, no matter how demanding. Through our network of integrated focused factories we ensure that your order is ready for delivery as promised.

We believe customer support after the sale is also crucial. It's an on-going relationship that ensures you receive excellent support at every level. Our knowledgeable team is comprised of highly qualified engineers with years of experience. They possess in-depth understanding of your applications and marketplace and bring proactive answers to the table – helping you solve problems and capitalise on opportunities.

With continued support and our global operational excellence programme we offer excellent consistent service across all chosen markets worldwide.

Customer Insight

You face new challenges every day. In the race to meet the increasing demands of tomorrow's emerging applications, you need innovative advanced material solutions now. We can help. Beyond developing innovative products, we're dedicated to finding customised, value-added solutions for our customers through an understanding of the industry-specific needs, opportunities and challenges you face. Our proprietary technology, coupled with our proven expertise, resources and processes, enable us to consistently deliver innovative solutions tailored to our customers' specific applications.

At Morgan AM&T, everything we do is driven by a passion to bring innovative solutions to the global market. We invest heavily in materials and product development in order to provide you with the performance solutions you need to meet new, demanding applications.

Morgan AM&T is a globally recognised materials technology company with unparalleled expertise in the processing and applications of carbon, graphite, silicon carbide, oxide ceramics and other related materials.

Innovating tomorrow's solutions today:

We define innovation as the ability to:

- Translate materials technology to emerging applications
- Develop value-adding proprietary technology
- Partner with our customers to innovate solutions tailored to specific applications
- Anticipate customer needs and develop solutions today that will translate into innovation for tomorrow

Key Market Sectors:

Aerospace

Defence

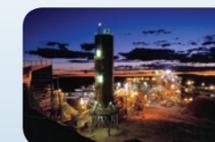

Railway

Industrial and Power

Fluid Flow

Mining

Super Abrasives

Thermal Management

Electronics

Wind Energy

Solar Energy

Customer Service

Tri Lap Carbon & Graphite

(Morgan AM&T Vietnam)

Suite 207, C6, Giang Vo Ward,

Ba Dinh Dist., Ha Noi, Viet Nam

Morgan AM&T is a Total Solution Provider

- Reliable products
- Customised customer care
- Primary resource to customers

- Dependable service
- Application engineering
